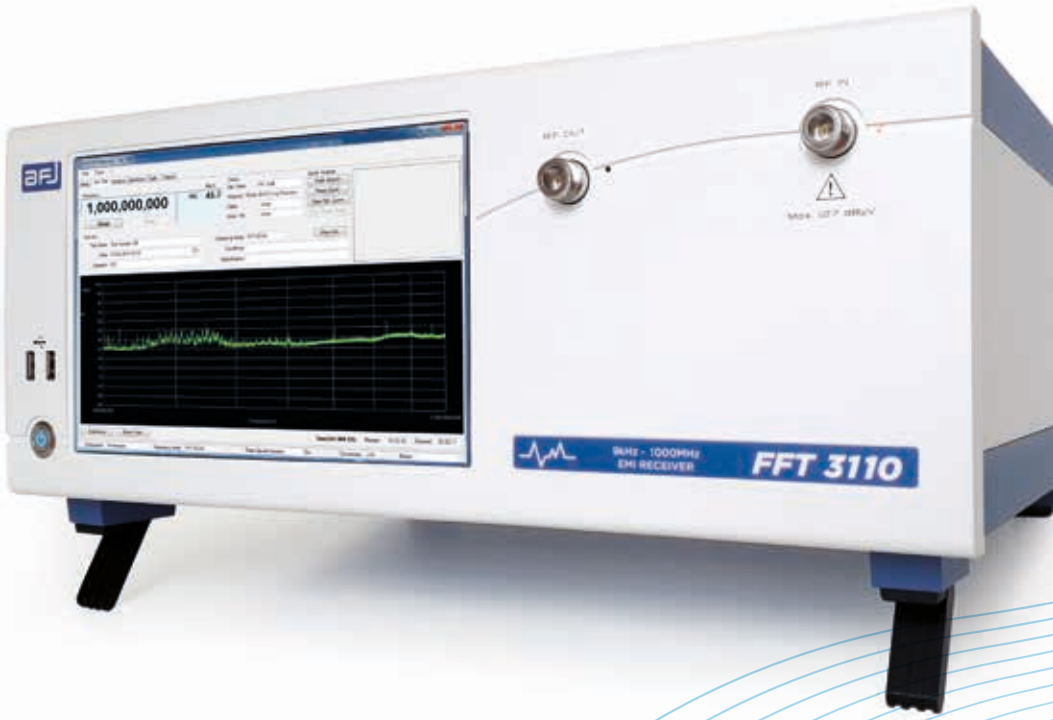
FFT 3110

EMI Receiver



**FULLY FFT DIGITAL EMI RECEIVER
FOR MEASUREMENT OF CONDUCTED AND RADIATED
ELECTROMAGNETIC INTERFERENCE FROM 9kHz TO 1GHz**

Compact designed and manufactured compliant to CISPR 16 International Standard, using FFT Scan Mode for fast measurements of conducted and radiated electromagnetic interference in accordance with requirements of EMI International, European and Product standards, pre-selectors and advanced software for EMC testing.

FFT 3110

EMI Receiver

Based on a PC integrated architecture with WINDOWS 10 Embedded OS, FFT 3110 EMI Receiver is ready to operate through 10.1" LCD display and advanced software for EMC testing, fitted with pre-selectors that allow excellent dynamic range and precise conducted and radiated emission measurements covering the frequency range from 9kHz to 1GHz.

Measurements to commercial EMI International, European and Product standards, shall be carried out directly by comparing the EMI spectrum with the associated limit lines and switching on the appropriate detectors.

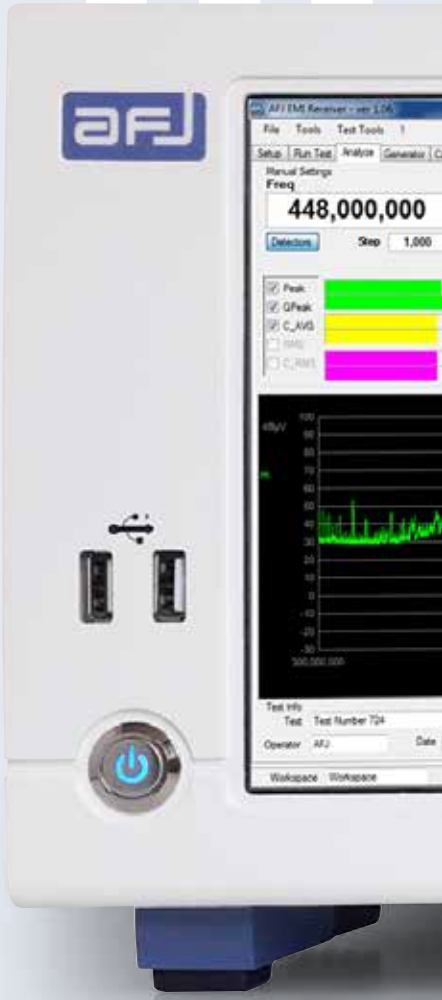
CISPR COMPLIANCE

FFT 3110 EMI Receiver fully complies with CISPR 16-1-1.
The response of Quasi-Peak Detector in terms of both absolute calibration and relative calibration lays between the tolerances of CISPR 16-1-1.
The pulse weighting conformity meets down to the minimum value of the Pulse Repetition Frequency (PRF) coming from the DUT, of 1Hz.
The FFT Scan Mode is compliant to CISPR 16-3.

Accuracy and reproducibility are key parameters for FFT 3110 EMI Receiver application.

MAIN FEATURES

- FFT Scan Mode
- Peak, Quasi-Peak, CISPR Average, RMS and CISPR RMS numerical detectors
- Automatic attenuation insertion in case of saturation condition during measurement sweep
- Precise digital overload detector to avoid saturation effects during analyzing function
- Correct pulse weighting to CISPR 16-1-1 from PRF of 1Hz
- High measurement speed
- Fast detection of critical frequencies (dwell time down to 1msec with Peak numerical detector)
- High sensitivity
- Large-signal immunity
- Low measurement uncertainty
- Correction values for attenuator/amplifier, cables loss, coupling networks and antenna factors
- Integrated signal generator (option)
- 10MHz External reference frequency



Software enables the operator to set all parameters and set-up FFT 3110 EMI Receiver as requested by CISPR 16-1-1 or to tailor it according to his specific needs.
Some examples are:

- Frequency range
- Numerical Detectors upgradable by software (Peak, Quasi Peak, CISPR Average, RMS, CISPR RMS and combination of them)
- Limits set by EMI International, European and Product standards
- Dwell measurement time
- Correction factors

TUNABLE PRE-SELECTION FILTERS

The input bandwidth of the front end is limited by pre-selection filters to reduce the energy at the input stage of the internal tuner to guarantee the wide dynamic range required for quasi-peak detection.

FFT FUNCTION

Compliant to CISPR 16-3, FFT is applied to the wide-band IF signal with the advantages of Fast Scan Mode.

FILTERS

Digital CISPR EMI Filters BW (200Hz, 9kHz and 120kHz) do not need any periodic adjustment and maintenance.

DETECTORS

Due to digital technology, five different types of numerical detectors and combinations of them can be selected by the operator: Peak, Quasi-Peak, CISPR Average, RMS and CISPR RMS.

DATA BASE

Equipment settings, measurements set-up, tests and measurements, frequency tables, external devices correction factors are automatically saved into powerful data base according to the proper work spaces defined by the operator.

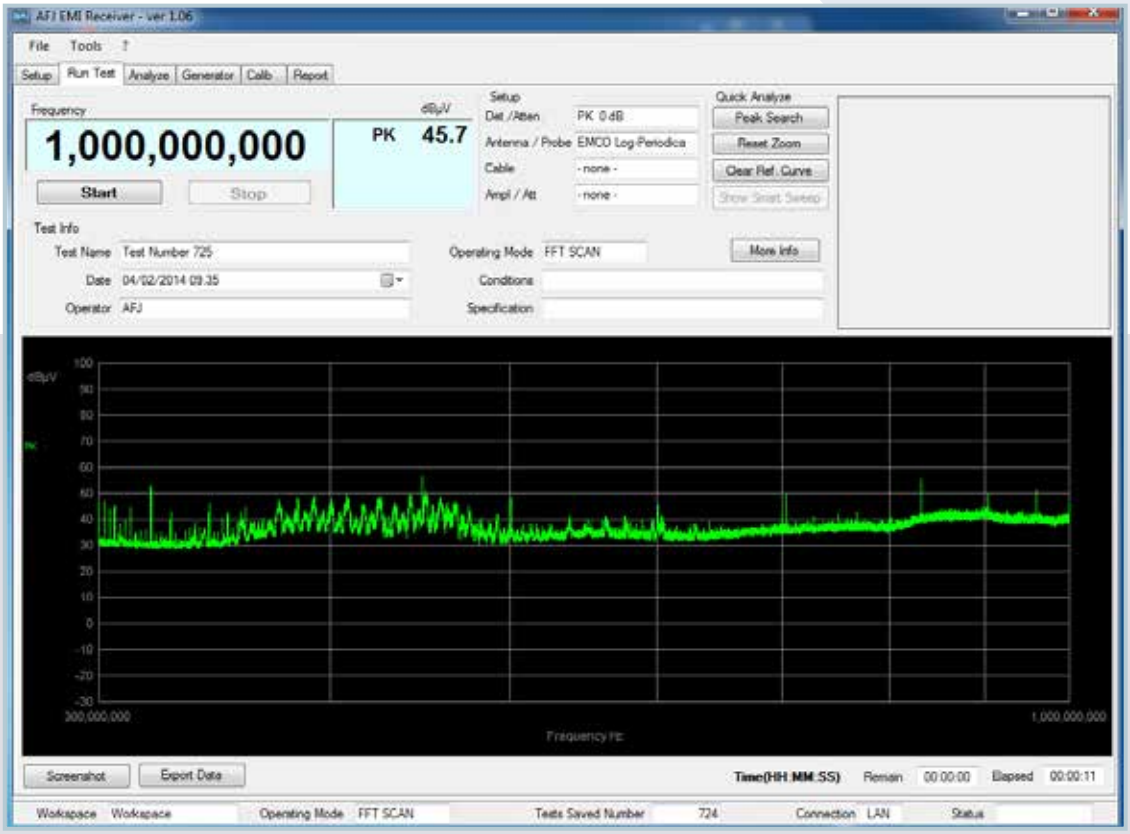
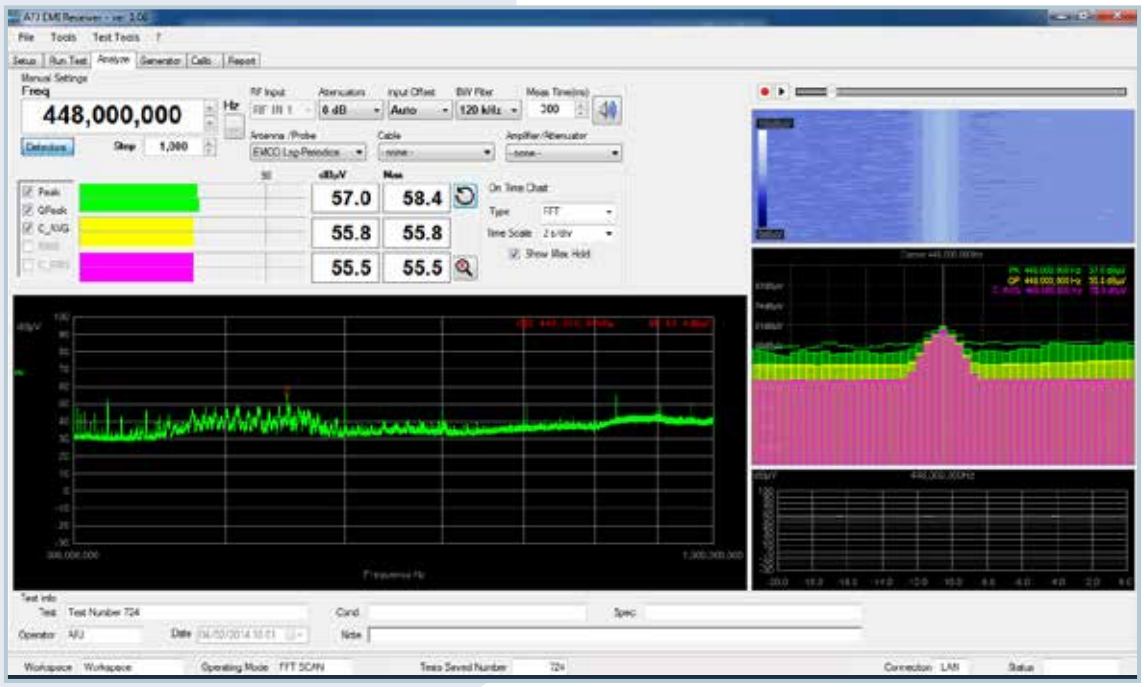
SETUP

Software settings of all measurement parameters

RUN TEST

Measurement in FFT SCAN mode





ANALYZE

Analysis of the measurement result with the possibility to perform a real time acquisition

REPORT

Creation of test report with all functions that are required for in-house tests to perform EMC diagnostic measurement and to document the test result
